## SUMMARY

Final-year B.Tech CSE student with a strong foundation in Java and Spring Boot for backend development, plus exposure to Python-based data analysis and Machine Learning. Skilled in building REST APIs, MySQL databases, and using Git/Docker for version control and containerization. Eager to contribute as a Backend Developer with an analytical edge.

## TECHNICAL SKILLS

**Programming Languages:** Java, SQL, Python

**Backend Development & Frameworks:** Spring Framework, Spring Boot, Spring MVC, Spring Data JPA (Hibernate), RESTful APIs

**Database Management:** MySQL, Relational Database Design

**Data Science & Machine Learning:** NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, Exploratory Data Analysis (EDA), Supervised & Unsupervised Learning, Principal Component Analysis (PCA)

**Development Tools & Environments:** Git, GitHub, Docker, JupyterLab, Google Colab

## PROJECTS

### Smart Kitchen Order Routing Platform

Jun 2026 – Jul 2026

QR Restaurant System with Dynamic Load Balancing

Java, Spring Boot, Spring MVC, JPA, Hibernate, MySQL

- Built a monolithic QR-code restaurant ordering system with three user roles (Manager, Chef, Customer) using Spring Boot MVC and Thymeleaf; implemented full CRUD for menus, tables, and chefs backed by Hibernate-managed MySQL entities with @OneToMany, @ManyToOne, and @ManyToMany relationships.
- Engineered a skill-based chef load-balancing algorithm in ChefAssignmentService that filters eligible chefs via a @ManyToMany join table and assigns orders to the least-loaded chef by summing preparationTime × quantity across active orders; computed real-time ETA using EtaService and persisted it on the Order entity via a single @Transactional cascade save.

### Corporate Expense Anomaly Detector

Dec 2025 – Jan 2026

Unsupervised Clustering & Anomaly Detection

Python, Scikit-learn, Pandas, Streamlit, SQL

- Developed an end-to-end unsupervised anomaly detection pipeline using K-Means on a 3,000-record transaction dataset; engineered a custom 0–1 Anomaly Score based on Euclidean distance from cluster centroids, achieving 53% anomaly recall and 30% precision to prioritize transactions for human review. Applied Label Encoding, StandardScaler, and PCA to preprocess and reduce 8-dimensional transaction data to 2D for clear visualization of normal vs. anomalous spending patterns.
- Built and deployed an interactive Streamlit dashboard featuring an executive summary, model evaluation metrics, 2D PCA visualizations, and a real-time expense analyzer; formulated 10 business-focused SQL queries to surface actionable insights including departmental anomaly rates, repeat offenders, and policy violations.

## EXPERIENCE

### Software Development Intern

Feb 2026 – May 2026

FOSSEE, IIT Bombay

Python, ifcopenshell, OpenCASCADE, SQLite

- Built an IFC Export Pipeline for Osdag (IIT Bombay) supporting structural connection types using ifcopenshell, enabling BIM interoperability with Revit, Tekla, and BIMcollab.
- Implemented high-LOD geometric accuracy and dynamic SQLite-driven IFC Property Sets across both Osdag and OsdagBridge, extending the pipeline to IRC-compliant bridge components.

## EDUCATION

### VIT Bhopal University, Bhopal

CGPA 8.64

B.Tech in Computer Science Engineering (AIML)

2023 – 2027

### Smt Sridevi Awasiya Vidyapeeth, Agra

87.0%

XII, CBSE

2022

### Ragendra Swarup Public School, Agra

88.7%

X, ICSE

2020

## CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified Data Science Professional (Oracle)
- Applied Machine Learning in Python (University of Michigan)
